### Abstract

The purpose of this study is to develop a reliable and valid scale for determining students perceptions to social values, which has important place in social science study programs. During the development of the draft of the scale, review of the literature has been primarily made; but determining the perceptions to social values at neither primary nor secondary level students does not observed. Then 5<sup>th</sup> grade social sciences program analyzed and precursors prepared with experts consultation. Scale performed at 411 5<sup>th</sup> grade students, who were studying at government school in the province of Istanbul. The construct validity of the scale was determined by means of exploratory factor analysis. Cronbach-Alpha reliability coefficient for calculated 0,86 for whole scale. The scale is open to improve and available to use.

**Key Words:** Value, value education, validity and reliability study.
